

7 Free AI Courses by ANTHROPIC

Claude Code in Action

Integrate Claude Code into your development workflow

Claude 101

Registered

Learn how to use Claude for everyday work tasks, understand core features, and explore resources for more advanced learning on other topics.

AI Fluency: Framework & Foundations

Learn to collaborate with AI systems effectively, efficiently, ethically, and safely

Building with the Claude API

This comprehensive course covers the full spectrum of working with Anthropic models using the Claude API

Introduction to Model Context Protocol

Learn to build Model Context Protocol servers and clients from scratch using Python. Master MCP's three core primitives—tools, resources, and prompts—to connect Claude with external services

15 lectures 1 hour of video 1 quiz ✓ Certificate of completion

About this course

This course covers Claude Code, a command-line AI assistant that uses language models to perform development tasks. You'll learn how Claude Code reads files, executes commands, and modifies code through its tool system, along with techniques for managing context, creating custom workflows, extending Claude Code with hooks, and integrating with external services.

AI Fluency: Framework & Foundations Course Trailer

Watch on  YouTube

14 lectures 1.1 hours of video 1 quiz ✓ Certificate of completion

About this course

This course is the result of a long partnership between Anthropic and professors Rick Dakan from Ringling College of Art and Design and Joseph Feller from University College Cork. Rick and Joe developed the AI Fluency Framework in 2023-2024, based on their research exploring how AI tools like Claude were transforming creative and business processes. When we saw the framework, we immediately recognized a shared vision: helping people interact with AI effectively and responsibly, beyond just “cool prompts.” Their framework offered exactly the kind of multidisciplinary perspective we believe is essential for navigating AI’s impact on society.

Building with the Claude API

ANTHROPIC

Course overview

84 lectures **8.1** hours of video **10** quizzes ✓ Certificate of completion

About this course

This course provides comprehensive coverage of the Claude API, from basic usage through advanced agent architectures. You'll learn to integrate Claude into applications, implement tool calling, build RAG pipelines, and design both deterministic workflows and flexible agent systems.

Introduction to MCP

Anthropic Academy / Courses

Introduction to Model Context Protocol

Learn how to build modular AI applications using MCP to connect Claude with external tools and data sources

Course goals

- Overview of MCP**
Understand what problems MCP solves
- MCP Clients and Servers**
Servers host resources, tools, and more. Clients use servers.
- Tools**
Tools are implemented on a server and extend an LLM's capabilities
- Resources**
Servers can deliver any kind of document or information to clients
- Prompts**

16 lectures **1** hour of video **1** quiz ✓ Certificate of completion

About this course

This course covers MCP, a protocol for connecting Claude to external services and data sources without manually writing tool schemas. You'll learn to build both MCP servers that expose tools, resources, and prompts, and MCP clients that consume them. The course includes a hands-on project where you implement a document management system using MCP.

Claude with Amazon Bedrock

Course overview 

85 lectures 8 hours of video 10 quizzes ✓ Certificate of completion

About this course

This course covers using Claude models through AWS Bedrock API, from basic requests through advanced agent implementations. You'll learn to make API calls, implement tool use, build RAG pipelines, work with MCP servers, and leverage features like Claude Code and computer use for automation.

Claude with Google Cloud's Vertex AI

Anthropic Academy / Courses

Claude with Google Cloud's Vertex AI

This comprehensive course covers the full spectrum of working with Anthropic models using Google Cloud's Vertex AI

85 lectures 8 hours of video 10 quizzes ✓ Certificate of completion

About this course

This course covers using Claude models through Google Cloud's Vertex AI platform. You'll implement core API features like streaming and tool use, build systematic prompt evaluation pipelines, understand RAG systems, and investigate agent architectures.

Introduction to agent skills

Introduction to agent skills

Learn how to build, configure, and share Skills in Claude Code — reusable markdown instructions that Claude automatically applies to the right tasks at the right time. This course takes you from creating your first Skill to distributing them across teams and troubleshooting common issues.

About this course

In this course, you'll learn how to stop repeating yourself and start teaching Claude once. You'll discover what Skills are and how they differ from other Claude Code customization options like CLAUDE.md, hooks, and subagents. You'll create your first Skill from scratch writing the SKILL.md frontmatter, crafting effective descriptions that reliably trigger matching, and organizing your skill directory with progressive disclosure to keep context windows efficient. You'll also explore advanced configuration options like restricting tool access with allowed-tools and using scripts that execute without consuming context.
