

Top 24 Claude Shortcuts that will 10X your Speed

Simplify and Summarise

ELI5

Meaning “Explain it like I’m 5 years old”, use this when you want Claude to explain something like you are a complete beginner. Perfect for complex ideas that sound scary at first glance.

TLDR

short for “Too long, didn’t read”, this is your classic “just give me the gist” command. Best used when the output is too long, and you want the core point in a snap.

BRIEFLY

A handy shortcut when you want a short answer without sounding too restrictive. It tells Claude to keep things tight and to the point.

EXEC SUMMARY

This one is for when you want the key takeaways in a polished, decision-maker-friendly format. Very useful for reports, long notes, or strategic documents.

Structure the Output

STEP-BY-STEP

Use this when you want Claude to break a process down into clear directions that go one step at a time.

Great for tutorials, workflows, and anything instructional.

CHECKLIST

This turns the output into an easy-to-scan action list.

Best for planning, reviewing, or making sure nothing gets missed.

SCHEMA

This is useful when you want structured output with fixed fields. Ideal for data extraction, templates, JSON-style responses, or repeatable formats.

/BEGIN WITH / END WITH

A neat way to control how the response starts and finishes. Helpful when you need Claude to follow a very specific framing or output pattern.

Set Role, Tone, or Audience

ACT AS

Use this when you want Claude to respond from a specific role or perspective. It could be a marketer, teacher, developer, consultant, or almost anyone else.

JARGON

This helps control how technical or simplified the language should be. Useful when you want Claude to either sound more expert or far more beginner-friendly.

AUDIENCE

A very practical shortcut for telling Claude who the response is meant for. This can completely change how the explanation is framed.

TONE

Use this to shape the mood of the answer, whether you want it formal, casual, persuasive, sharp, friendly, or something else.

Analyse from Different Angles

COMPARE

Use this when you want Claude to place two or more options side by side. Great for weighing tools, ideas, strategies, or decisions.

SWOT

A quick way to get a strengths, weaknesses, opportunities, and threats breakdown. Very useful for business ideas, products, or strategic planning.

PARALLEL LENSES

A smart shortcut for analysing something through different frameworks at once, such as business, technical, and user experience angles.

FIRST PRINCIPLES

Use this when you want Claude to strip the issue down to the basics and reason from the ground up. Great for simplifying complex problems.

Improve Quality and Add Guardrails

REFLECTIVE MODE

Use this when you want Claude to think more carefully about its own answer before finalising it. Helpful for nuanced or judgment-heavy tasks.

SYSTEMATIC BIAS CHECK

This tells Claude to look for bias, blind spots, or one-sided assumptions in the response. Very useful when dealing with sensitive or opinion-based topics.

EVAL-SELF

A handy shortcut when you want Claude to review its own answer and spot weaknesses. It can help improve clarity, completeness, or logic.

GUARDRAIL

Use this to set boundaries around the response. Great when you want Claude to stay within a certain scope, tone, or level of risk.

Guide Reasoning and Rewriting

CONTEXT STACK

Use this when you want Claude to consider multiple layers of context before answering. Helpful for complex tasks where one-line prompting is not enough.

DELIBERATE THINKING

A useful shortcut when you want a slower, more considered answer. It nudges Claude to think more deeply before responding.

REWRITE AS

This is for when the core idea is fine, but the presentation is not. You can use it to quickly transform text into a different style, tone, or format.

CHAIN OF THOUGHT

This pushes Claude to reason through the problem more carefully instead of jumping straight to the conclusion. Which means you get to see the entire thinking that goes behind the scenes. Best for trickier questions or layered logic.
